

# WHY CHOOSE ALLWEATHER WOOD SUPERIOR KDAT?

- Arrows are stamped on each board indicating which direction the board should be installed
- Reduced crowning and joists that crown in opposite directions
- Reduced warp including bow, crook, and twist
- Minimized length and width shrinkage; joists that pull away from the house or other structures can cause expensive callbacks for contractors
- Kiln Dried After Treatment (KDAT) material is significantly lighter and easier to handle than regular treated lumber, resulting in lower labor and installation costs
- Allweather Wood Superior KDAT is treated with the advanced technology of MCA .15 Cedartone for use in Ground Contact applications
- Covered by a Limited Six-Month Consumer Warranty

## HOW DO YOU KNOW IT'S BETTER?

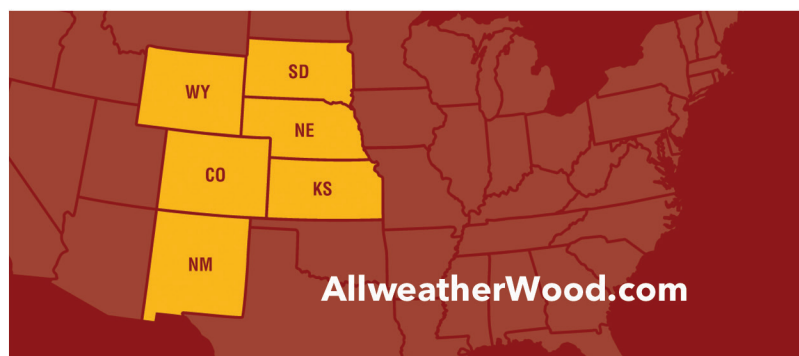

Low humidity climates present challenges to products used in exterior applications. Allweather Wood Superior KDAT starts with high-grade lumber selected for appearance and low wane. Graded by a patented, computerized system, Allweather Wood Superior KDAT is manufactured to remain consistent and predictable. Each board is stamped with an arrow indicating the direction the board may crown. That means you can build with confidence that joists installed correctly, according to the stamped arrows, will not crown in opposite directions causing a wavy deck surface.

## WHERE TO BUY

Allweather Wood Superior KDAT is available at local lumberyards and independent home improvement retailers throughout Colorado, Kansas, Nebraska, New Mexico, South Dakota, and Wyoming. Call or visit your local dealer for availability and current pricing.
